

MarkingForge

QuickStart - the short version

3DS MAX 2027 · VERSION 1.5.32 · ABOUT 15 MINUTES

Only what you need to start: 8 short lessons. Everything else is in the full **QuickStart** and the **Reference - MarkingForge > Documentation** opens them.

Before you start

- 1 Look at the 3ds Max menu bar. You should see a **MarkingForge** menu.
- 2 Open **MarkingForge > Set up standard shortcuts...** It gives each dial its key, or says they already have one.

A dial is a round menu under a key

Hold

Alt+1

: eight commands appear around the mouse.

Aim, do not read

Move towards a command and let go of the key. Your hand learns the direction.

Nothing can go wrong

Let go in the middle, or press Esc: nothing runs.
Ctrl+Z undoes any command.

PART 1

Using the dials

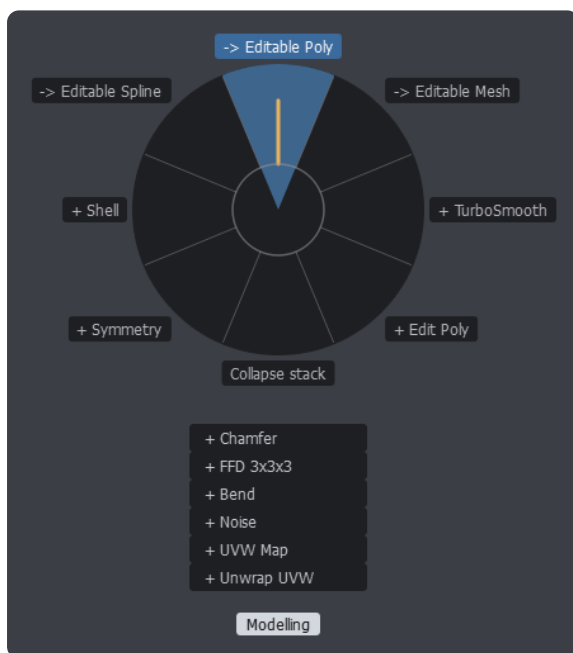

Five lessons. Open an empty scene and try each step.

1

Your first gesture

2 min

- 1 Mouse over a viewport. Hold **Alt+4** - the Create dial.
- 2 Move up to **Box** and let go. Drag a box in the viewport.
- 3 Click the box. Hold **Alt+1**, move up to -> **Editable Poly**, let go.

Alt+1, moved up: the box becomes an Editable Poly.

RESULT

Two gestures, no menus.

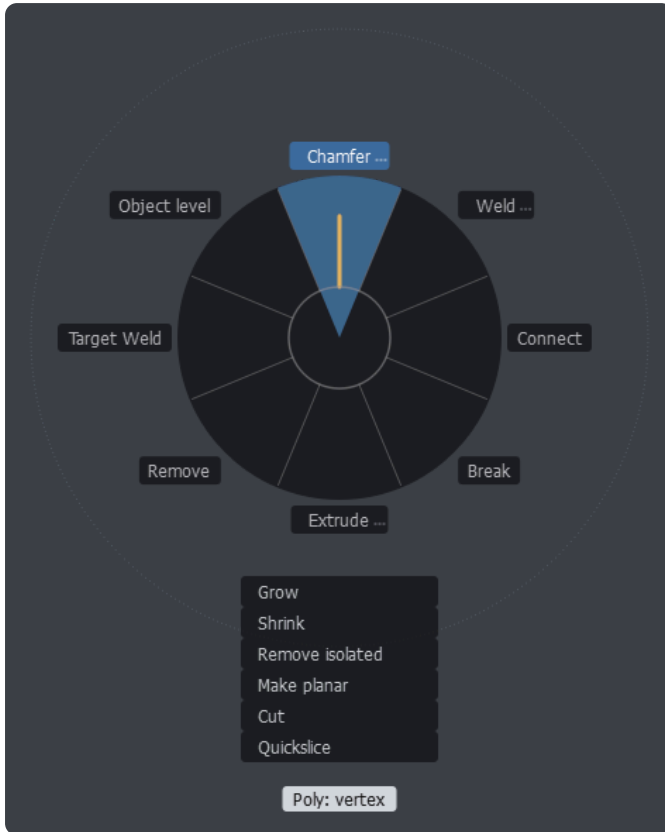

2

The dial changes with your work

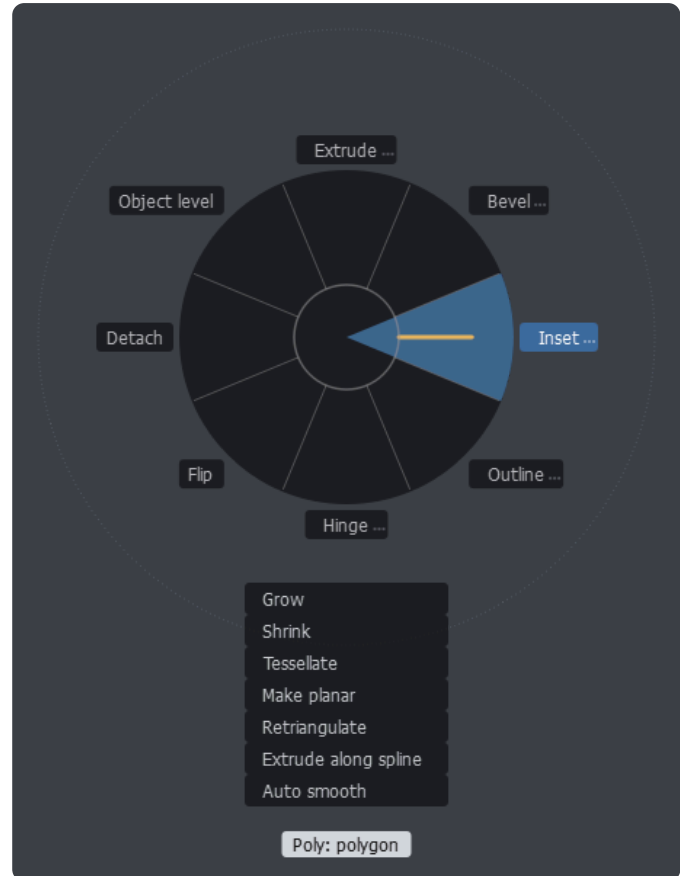

2 min

- 1 Press **1** (vertices). Hold **Alt+1**: now it shows vertex tools - Chamfer, Weld, Connect...
- 2 Press **4** (polygons). Hold **Alt+1**: Inset, Extrude, Bevel...

3 Move up-left (**Object level**) to go back to the whole object.

Vertices.

Polygons.

3 Flick - the fast way

2 min

Press the key and move **at the same moment**, then let go. The command runs and the dial does not even show. Try each one a few times:

Press, then move	What happens
Ctrl+Alt+7, up	Zoom to see everything
Alt+3, up / down	Select all / select nothing
Ctrl+Alt+1, up	Move tool
Alt+7, up	Undo one step

4 Near or far: the dotted circle

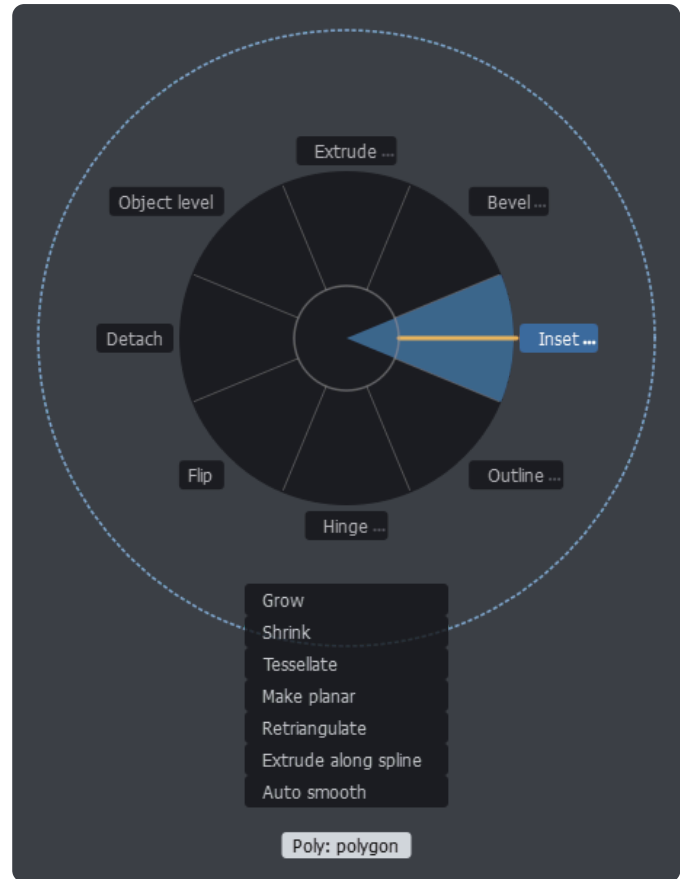

2 min

Commands with three dots (Chamfer..., Inset...) have a settings window.

- Let go **near** the dial: the command starts at once - drag in the viewport to set it.
- Let go **past the dotted circle** (it lights up): the settings window opens.

Near: Inset starts at once.

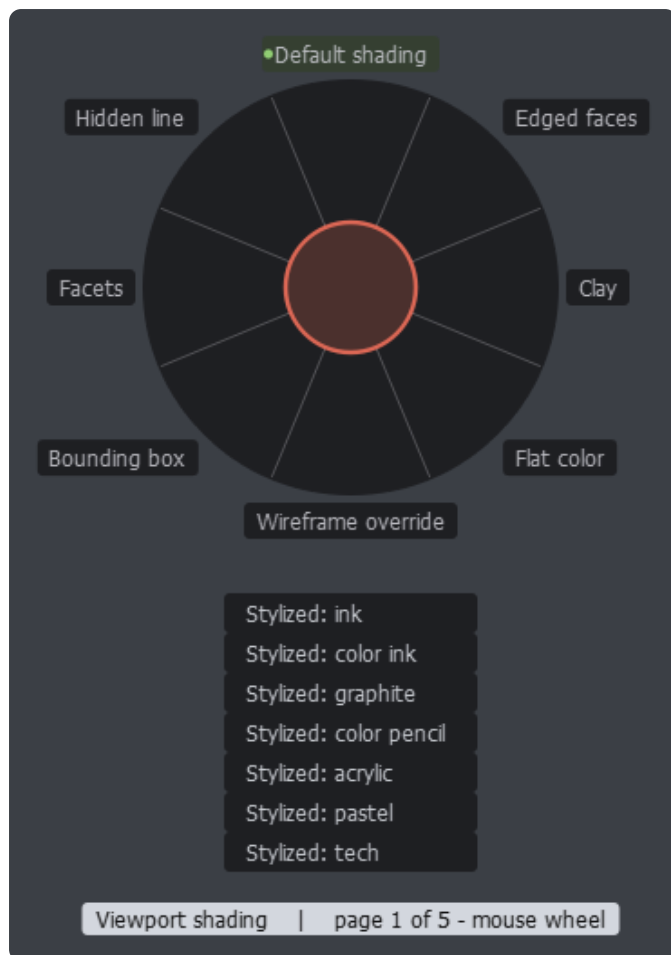

Past the circle: Inset's window.

5

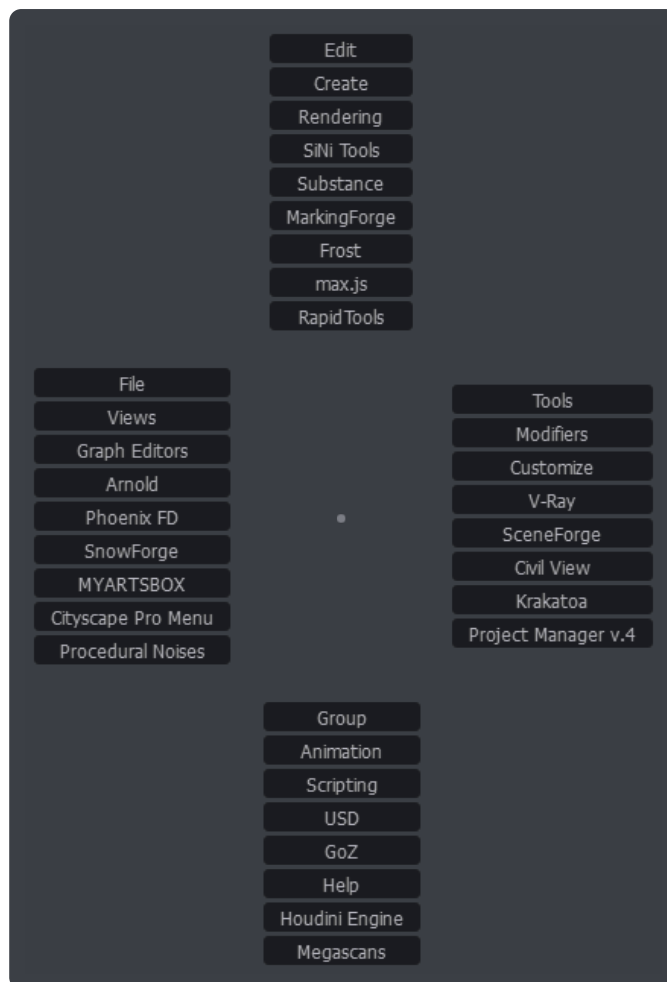

Pages, the hotbox and undo

2 min

- 1 Hold **Alt+5**: how the viewport looks. Keep holding and **turn the mouse wheel** - more pages (lights, what is shown, views).
- 2 Turn the wheel one step the other way: the **hotbox** - every 3ds Max menu as tiles. Esc closes it.
- 3 Hold **Alt+7**: your last steps by name. Pick one to undo back to it.

Alt+5 - the viewport.

Alt+5, wheel - the hotbox.

Which key is which

The number (1-8) is the place; **Alt**, **Ctrl+Alt** or **Shift+Alt** is the row.

Support, bug reports and feature requests

ISSUES	github.com/Forge-Plugins/MarkingForge/issues
ROADMAP	trello.com/b/7gJVqG8Y/markingforge-features-roadmap
E-MAIL	forgeplugins@gmail.com
WEB	https://forgeplugins.tech (forgeplugins.tech - more plugins by the author)

Bug reports and feature requests are best opened as issues on GitHub - the forms there ask for exactly what is needed, and you can follow the fix. Questions, and anything you would rather not post publicly (licence, purchase), go to the e-mail address. Every message is read.

Reporting a bug

- 1 In 3ds Max choose **MarkingForge > Report a bug...** - it copies your 3ds Max version, MarkingForge version, configuration summary and start-up log to the clipboard. It works even when the plugin did not load.
- 2 Open github.com/Forge-Plugins/MarkingForge/issues and pick **Bug report** - or write an e-mail to forgeplugins@gmail.com instead. Both are links in the window that opens (since 1.5.20), one click each.
- 3 Say what you did, what you expected and what happened instead, then paste the details with **Ctrl+V**.
- 4 Add a screenshot if you can. When the problem is in one dial, attach a preset of it (editor > **Save preset...**).

Suggesting a feature

Open an issue with the **Feature request** form, choose **MarkingForge > Suggest a feature...**, or simply write. Describe what you would like to do and how you do it today - a concrete example from your work says more than a list of wishes. Ideas for new built-in dials, commands and options are all welcome. What is already planned and in progress is on the **Roadmap** above - **MarkingForge > Roadmap (Trello)** opens it too.

Nothing is sent by the plugin itself: the details go to the clipboard and your own e-mail program, so you see everything that leaves your computer. MarkingForge has no network access.
